

## **BPM offers two stages of Performance E9x M3 Software (\$999):**

**Stage I** is designed for lightly modified or stock vehicles without changes to the primary catalyts.

**Stage II** is tailored to vehicles that have changes to the primary cats - such as an Akrapovic Evolution, GT4, High Flow Cats, Turner Test Pipes, ACM Test Pipes, etc..

The latest DME software (240E) update is included to ensure you are on the latest software version from BMW. You may benefit from the factory software update alone.

### **Both stages include user selectable options:**

- Selective mapping of throttle response in Normal and Sport modes
- Raised redline to 8,500 or 8,600 RPM (Stock is 8400 RPM)
- Top speed limiter raise or removal (Stock is 155mph)
- Launch control for manual cars at 3,500 or 4,000 RPM
- Elimination of cold start routine for quieter and smoother starts
- Cold Start Rev Limit reduction 4,500 to keep the engine healthy
- Suppression of the Increased Emissions warning for exhaust changes
- Servotronic Speed Dependent Steering Tightness Enhancements

### **Both stages include our standard changes:**

- VANOS changes for optimal drivability characteristics and power delivery
- Part throttle ignition and full throttle ignition optimization for your octane
- Part fueling and full throttle fueling optimizations
- Optimization of torque management parameters
- Enhanced protection for hot oil and coolant temperatures

Features can be picked independently and tailored to your specification.

The price of the tune includes our specialty designed tuning cable and user-friendly BPMFlash software. We also offer support for Apple/Mac users as well.

### **With the software, you can:**

- Identify your ECU and the software currently loaded
- Update your vehicles engine software to the latest version from BMW
- Flash the vehicle with Performance software suited to your specifications
- Flash the vehicle back to stock programming
- Read fault codes from the engine control unit
- Clear service engine soon lights and fault codes
- Clear adaptation data

The software allows for seamless integration with dealership factory systems for service and diagnostics as well. You will experience more responsiveness, smoothness, and performance out of your M3.

This performance software is a result of countless hours of street, dyno, and track testing. BPM has programmed E9x M3's in over 40 countries, ranging in climates from below zero to extreme temperatures in Africa.

Loading of our performance calibration takes under twenty minutes including setup time and the software update to the latest BMW version. No battery tender or charger is required. To switch between files (i.e, back to stock, race tune, valet mode tune) takes only five minutes after loading up your laptop and plugging in the cable. The valet calibration is provided free of charge. We also include step by step installation and operating guides.

Typical performance increase is +15-25hp and 10-18ft/lbs of torque with software alone.

Please contact us Toll Free at 888-557-5133 or at [info@bpmsport.com](mailto:info@bpmsport.com) if you have any questions or would like to place an order.

For vehicles equipped with the Dual Clutch/DKG Transmission, we recommend pairing our performance engine software with performance transmission software. More information on transmission tuning is available here: <http://www.bpmsport.com/DCTFlash.pdf>

Package pricing is available for those that combine multiple services offered.
